

Internal Shoe Seal for Internal Floating Roof Tanks

The **BTE Shoe Seal** is designed for easy installation and to provide long life when used with BTE Heavy Duty Internal Floating Roofs. The BTE Internal Shoe Seal can be retro-fitted to other makes of aluminium internal floating roofs. Suitable additional buoyancy and rim-reinforcement may be necessary.

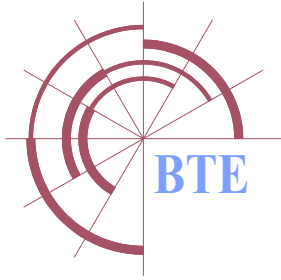

The **BTE Shoe Seal** vapour barrier fabric can be reinforced urethane, PVC/NBR, or glass reinforced PTFE. Essential metal parts are made in 304 grade stainless steel, with use of aluminium for some components, for lightness.

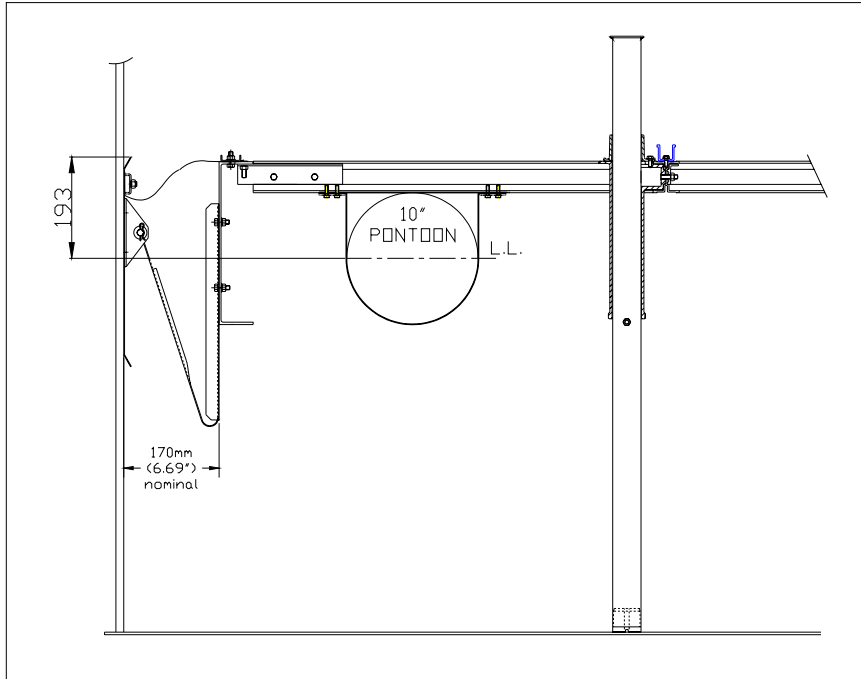

The above materials choice makes it possible for **BTE** to select the correct seal materials to suit all petrochemical applications.

Suitable for use with 100% Benzene, Toluene, Xylene, Paraxylene, MTBE, TAME, ETBE, Methanol, MEK, Sulfolane, gasoline and many other stored products.

BTE Internal Shoe Seal

BTE Tank Products include:

- Aluminium Internal Floating Roofs
- Floating Roof Tank Seals
- Floating Roof Tank Drain Systems
- Floating Roof Tank Fire Foam Systems
- Floating Suction lines & Skimmers
- Floating Suction Swing Joints 10" to 30"
